

Web Hosting Services

Speed and reliability are the calling cards of a reliable web hosting company. Abitat.ca has powerful SUN Solaris, Linux, and MS Windows NT servers ready to host your website. Abitat.ca is not a dial-up Internet service provider - we reserve all of our Fibre Optic bandwidth for hosting web sites and powering the databases behind them. What does this mean for you? Your end-user isn't left waiting in line for information because the server is busy with ISP traffic. Website information is available to the world when it's needed, no clutter, no bottleneck, no excuses, just excellent, reliable performance.

Our technical team combines the power of our servers with cutting edge software technology to ensure that your site performs optimally. Secure Socket Layers (SSL) and certificate encryption implementation can be used to deliver sensitive information securely. Virtual Private Networks (VPNs) allow confidential information to be shared by members of organizations anywhere in the world. Please see below for our standard hosting packages.

Personal & SME Hosting Levels

	Gold \$300.00/yr	Platinum \$600.00/yr
